Failure Type	Assertion Failure
Environment	ENV-003 — Hub Lab
Build Version	5.2.7

3. Problem Description

During execution EXEC-03143, test case TC-2024 failed with Assertion Failure. The system exhibited assertion failure when Bluetooth interference is present.

4. Reproduction Steps

1. Check server logs for event code 'EVT-1800'.
2. Disconnect the hub and wait 5 seconds.
3. Assert that database record for entity 'ENT-473' has status='PENDING'.
4. Simulate network drop using the network emulator profile 'Offline'.

5. Expected vs Actual Behaviour

Expected	The system should complete firmware over-the-air update within the defined SLA.
Actual	The system exhibited assertion failure when Bluetooth interference is present.

6. Root Cause

Retry logic does not apply exponential back-off; storm of reconnection attempts saturates the gateway.

7. Resolution

Added key rotation broadcast to all replica nodes; integration test verifies propagation.
