Requirement Specification

REQ-0282 — Error Handling — Diagnostics Report Generation

1. Identification

Requirement ID	REQ-0282
Title	Error Handling — Diagnostics Report Generation
Type	Security
Priority	Critical
Severity	Trivial
Status	Deprecated
Version	v2.4
Created	2023-06-01
Updated	2023-04-03
Source Document	SRS-APP-001-v2.pdf

2. Application & Solution

Application ID	APP-001
Application	SmartHome
Domain	IoT
App Version	6.0.0
Solution ID	SOL-011
Solution	Activity Tracker
Component	Health API
Feature	session token refresh

3. Requirement Description

The system shall enforce Bluetooth reconnection consistently under high-load conditions.

4. Acceptance Criteria

AC-1: The system shall satisfy the requirement within the defined performance SLA (p95 < 500ms).

AC-2: All failure scenarios must return a human-readable error message to the user.

AC-3: All events must be logged to the audit trail with a valid timestamp and user context.

AC-4: The feature must operate correctly in all supported environments (Mobile, Wearable, Cloud).

AC-5: Security constraints: all data in transit must be encrypted using TLS 1.3 or higher.

5. Dependencies

This requirement depends on the Activity Tracker (SOL-011) being operational and at version 4.9 or above.
