Test Plan

TS-0004 — APP-009 — Performance Suite 4

1. Test Plan Overview

Suite ID	TS-0004
Suite Name	APP-009 — Performance Suite 4
Suite Type	Security
Priority	Medium
Status	Draft
Application	APP-009 — DeviceHub
Release	REL-001 — Release 4.1.0
Release Version	4.1.3
Release Date	2023-01-15
Created Date	2023-10-11

2. Scope & Objectives

This test plan covers security testing for the DeviceHub application. Suite covering Encryption Module scenarios for APP-009.

3. Test Strategy

Testing will follow a risk-based approach with priority on Medium severity scenarios. Automated test cases will be executed first to detect regressions early, followed by manual exploratory testing for edge cases. Performance and security test cases will run in parallel in dedicated environments.

4. Requirements Under Test

REQ-0373	Battery — Dark Mode	UI Behavior	Medium	Approved
REQ-0183	Connectivity — Multilingual Support	Usability	High	Deprecated
REQ-0419	Functional — Diagnostics Report Generation	UI Behavior	Medium	Approved
REQ-0470	Compatibility — Payment Processing	Error Handling	Critical	Approved
REQ-0341	Recovery — Configuration Reload	Security	Low	Approved

5. Test Cases Summary

TC-0080	Validate that push notification delivery enforces ...	Functional	Semi-Automated	Critical
TC-0136	Validate that payment processing enforces access c...	Performance	Automated	High
TC-0167	Confirm that playlist shuffle triggers the expecte...	Compatibility	Manual	Medium
TC-0253	Ensure that diagnostics report generation does not...	Negative	Automated	High
TC-0264	Verify that user authentication completes successf...	Compatibility	Automated	Low

SYNTHETIC DATA — No real Samsung confidential information

TC-0310	Verify that session token refresh fails gracefully...	Functional	Manual	High
TC-0409	Verify end-to-end flow of media streaming from car...	Smoke	Automated	High
TC-0568	Ensure that secure key rotation does not exceed th...	End-to-End	Semi-Automated	Low

6. Test Environments

Primary	Mobile Lab — Android 14 — WiFi-6 (ENV-001)
Secondary	Staging — Android 13 — LTE (ENV-007)
Extended	Low Network Env — Android 14 — Low-BW Sim (ENV-009)
Performance	High Load Env — Ubuntu 22.04 — Ethernet (ENV-010)

7. Entry & Exit Criteria

Entry — Build	Smoke suite must pass 100% before full regression begins.
Entry — Env	All required environments must be Available status.
Entry — Defects	No Critical-severity open defects from the previous cycle.
Exit — Pass Rate	Overall pass rate >= 95%.
Exit — Critical	Zero open Critical-severity defects.
Exit — Coverage	All Priority=High test cases executed.

8. Risks

Network instability in low-BW env	Medium	Reserve stable WiFi fallback
Device unavailability	Low	Reserve backup devices 48h ahead
Build quality regression	Medium	Execute smoke before full regression
Flaky automation scripts	Low	Quarantine flaky TCs, re-run 3x

9. Responsible Engineers

ENG-021	David Lee	Senior QA Engineer	Platform QA
ENG-051	Victor Garcia	Test Architect	Security QA
ENG-083	Nina Vargas	Security Tester	Mobile QA

10. Synthetic Data Notice

This document is entirely synthetic and intended for AI/RAG research only.
