Test Plan

TS-0026 — APP-003 — Integration Suite 26

1. Test Plan Overview

Suite ID	TS-0026
Suite Name	APP-003 — Integration Suite 26
Suite Type	Integration
Priority	Critical
Status	Draft
Application	APP-003 — GalaxySearch
Release	REL-004 — Release 5.0.0
Release Version	5.0.9
Release Date	2023-05-30
Created Date	2022-12-01

2. Scope & Objectives

This test plan covers integration testing for the GalaxySearch application. Suite covering Notification Handler scenarios for APP-003.

3. Test Strategy

Testing will follow a risk-based approach with priority on Critical severity scenarios. Automated test cases will be executed first to detect regressions early, followed by manual exploratory testing for edge cases. Performance and security test cases will run in parallel in dedicated environments.

4. Requirements Under Test

REQ-0131	Data Synchronization — Search Query Execution	Battery	Medium	Approved
REQ-0469	Recovery — Crash Reporting	Reliability	Critical	Approved
REQ-0386	Performance — Audit Logging	Usability	High	Draft
REQ-0018	Authentication — Biometric Verification	Performance	Low	Approved
REQ-0161	Reliability — Parental Controls	Functional	Critical	Draft

5. Test Cases Summary

TC-0116	Validate that session token refresh returns the co...	Regression	Automated	Low
TC-0124	Verify end-to-end flow of background sync from car...	Performance	Manual	Medium
TC-0172	Verify that media streaming completes successfully...	Negative	Manual	High
TC-0299	Validate that diagnostics report generation return...	Sanity	Manual	Low
TC-0377	Verify that health metric upload fails gracefully ...	Reliability	Automated	Low

SYNTHETIC DATA — No real Samsung confidential information

TC-0595	Validate that secure key rotation returns the corr...	Regression	Manual	Medium
TC-0683	Ensure that voice command recognition does not exc...	Security	Semi-Automated	High
TC-1031	Ensure that voice command recognition does not exc...	Compatibility	Semi-Automated	Low

6. Test Environments

Primary	Mobile Lab — Android 14 — WiFi-6 (ENV-001)
Secondary	Staging — Android 13 — LTE (ENV-007)
Extended	Low Network Env — Android 14 — Low-BW Sim (ENV-009)
Performance	High Load Env — Ubuntu 22.04 — Ethernet (ENV-010)

7. Entry & Exit Criteria

Entry — Build	Smoke suite must pass 100% before full regression begins.
Entry — Env	All required environments must be Available status.
Entry — Defects	No Critical-severity open defects from the previous cycle.
Exit — Pass Rate	Overall pass rate >= 95%.
Exit — Critical	Zero open Critical-severity defects.
Exit — Coverage	All Priority=High test cases executed.

8. Risks

Network instability in low-BW env	Medium	Reserve stable WiFi fallback
Device unavailability	Low	Reserve backup devices 48h ahead
Build quality regression	Medium	Execute smoke before full regression
Flaky automation scripts	Low	Quarantine flaky TCs, re-run 3x

9. Responsible Engineers

ENG-093	Rachel Yamamoto	Automation Engineer	XR QA
ENG-069	Aiden Martinez	Security Tester	Release QA
ENG-054	Helen Park	Senior QA Engineer	XR QA

10. Synthetic Data Notice

This document is entirely synthetic and intended for AI/RAG research only.
