Test Plan

TS-0029 — APP-005 — Integration Suite 29

1. Test Plan Overview

Suite ID	TS-0029
Suite Name	APP-005 — Integration Suite 29
Suite Type	Performance
Priority	Critical
Status	Archived
Application	APP-005 — WearableHealth
Release	REL-004 — Release 5.0.0
Release Version	5.0.9
Release Date	2023-05-30
Created Date	2022-10-13

2. Scope & Objectives

This test plan covers performance testing for the WearableHealth application. Suite covering Cache scenarios for APP-005.

3. Test Strategy

Testing will follow a risk-based approach with priority on Critical severity scenarios. Automated test cases will be executed first to detect regressions early, followed by manual exploratory testing for edge cases. Performance and security test cases will run in parallel in dedicated environments.

4. Requirements Under Test

REQ-0413	Connectivity — Parental Controls	Compatibility	High	Approved
REQ-0217	Connectivity — Configuration Reload	Usability	Critical	Deprecated
REQ-0294	Security — Device Pairing	Recovery	High	Approved
REQ-0470	Compatibility — Payment Processing	Error Handling	Critical	Approved
REQ-0046	Battery — Configuration Reload	Usability	Critical	Approved

5. Test Cases Summary

TC-0003	Confirm that payment processing triggers the expec...	Smoke	Semi-Automated	High
TC-0019	Ensure configuration reload synchronizes correctly...	Functional	Automated	Critical
TC-0317	Validate that data synchronization returns the cor...	Reliability	Semi-Automated	Low
TC-0446	Verify that background sync fails gracefully with ...	Smoke	Manual	High
TC-0516	Validate that diagnostics report generation return...	Compatibility	Semi-Automated	Low

SYNTHETIC DATA — No real Samsung confidential information

TC-0673	Validate that configuration reload returns the cor...	End-to-End	Semi-Automated	Low
TC-0677	Verify that biometric verification fails gracefull...	Regression	Manual	Critical
TC-0996	Test that playlist shuffle correctly handles inval...	Reliability	Semi-Automated	High

6. Test Environments

Primary	Mobile Lab — Android 14 — WiFi-6 (ENV-001)
Secondary	Staging — Android 13 — LTE (ENV-007)
Extended	Low Network Env — Android 14 — Low-BW Sim (ENV-009)
Performance	High Load Env — Ubuntu 22.04 — Ethernet (ENV-010)

7. Entry & Exit Criteria

Entry — Build	Smoke suite must pass 100% before full regression begins.
Entry — Env	All required environments must be Available status.
Entry — Defects	No Critical-severity open defects from the previous cycle.
Exit — Pass Rate	Overall pass rate >= 95%.
Exit — Critical	Zero open Critical-severity defects.
Exit — Coverage	All Priority=High test cases executed.

8. Risks

Network instability in low-BW env	Medium	Reserve stable WiFi fallback
Device unavailability	Low	Reserve backup devices 48h ahead
Build quality regression	Medium	Execute smoke before full regression
Flaky automation scripts	Low	Quarantine flaky TCs, re-run 3x

9. Responsible Engineers

ENG-021	David Lee	Senior QA Engineer	Platform QA
ENG-033	Xavier Evans	Automation Engineer	Security QA
ENG-037	George Okonkwo	Test Architect	Automation QA

10. Synthetic Data Notice

This document is entirely synthetic and intended for AI/RAG research only.
