Test Plan

TS-0030 — APP-010 — Integration Suite 30

1. Test Plan Overview

Suite ID	TS-0030
Suite Name	APP-010 — Integration Suite 30
Suite Type	Performance
Priority	High
Status	Draft
Application	APP-010 — MediaPlatform
Release	REL-001 — Release 4.1.0
Release Version	4.1.3
Release Date	2023-01-15
Created Date	2022-10-19

2. Scope & Objectives

This test plan covers performance testing for the MediaPlatform application. Suite covering Health API scenarios for APP-010.

3. Test Strategy

Testing will follow a risk-based approach with priority on High severity scenarios. Automated test cases will be executed first to detect regressions early, followed by manual exploratory testing for edge cases. Performance and security test cases will run in parallel in dedicated environments.

4. Requirements Under Test

REQ-0015	Authentication — Media Streaming	Data Synchronization	Medium	Approved
REQ-0176	Network Behavior — Session Token Refresh	UI Behavior	High	Deprecated
REQ-0107	Performance — Nfc Tap-To-Pay	Data Synchronization	Critical	Deprecated
REQ-0138	Connectivity — Push Notification Delivery	Compatibility	Critical	Deprecated
REQ-0092	Usability — Haptic Feedback	UI Behavior	Critical	Draft

5. Test Cases Summary

TC-0306	Verify that device pairing completes successfully ...	End-to-End	Automated	Medium
TC-0434	Verify end-to-end flow of diagnostics report gener...	End-to-End	Manual	Medium
TC-0513	Verify that user authentication fails gracefully w...	Reliability	Semi-Automated	Medium
TC-0674	Validate that Bluetooth reconnection returns the c...	System	Automated	High

SYNTHETIC DATA — No real Samsung confidential information

TC-0918	Verify end-to-end flow of session token refresh fr...	Negative	Manual	Medium
TC-0921	Validate that Bluetooth reconnection returns the c...	End-to-End	Automated	Critical
TC-1105	Test that device pairing correctly handles invalid...	Integration	Semi-Automated	Critical
TC-1198	Validate that biometric verification returns the c...	Reliability	Manual	Low

6. Test Environments

Primary	Mobile Lab — Android 14 — WiFi-6 (ENV-001)
Secondary	Staging — Android 13 — LTE (ENV-007)
Extended	Low Network Env — Android 14 — Low-BW Sim (ENV-009)
Performance	High Load Env — Ubuntu 22.04 — Ethernet (ENV-010)

7. Entry & Exit Criteria

Entry — Build	Smoke suite must pass 100% before full regression begins.
Entry — Env	All required environments must be Available status.
Entry — Defects	No Critical-severity open defects from the previous cycle.
Exit — Pass Rate	Overall pass rate >= 95%.
Exit — Critical	Zero open Critical-severity defects.
Exit — Coverage	All Priority=High test cases executed.

8. Risks

Network instability in low-BW env	Medium	Reserve stable WiFi fallback
Device unavailability	Low	Reserve backup devices 48h ahead
Build quality regression	Medium	Execute smoke before full regression
Flaky automation scripts	Low	Quarantine flaky TCs, re-run 3x

9. Responsible Engineers

ENG-093	Rachel Yamamoto	Automation Engineer	XR QA
ENG-031	Laura Rossi	QA Engineer	Automation QA
ENG-005	Rachel Ortega	Test Lead	Release QA

10. Synthetic Data Notice

This document is entirely synthetic and intended for AI/RAG research only.
