Test Plan

TS-0102 — APP-004 — Security Suite 102

1. Test Plan Overview

Suite ID	TS-0102
Suite Name	APP-004 — Security Suite 102
Suite Type	Full
Priority	Critical
Status	Archived
Application	APP-004 — DigitalWallet
Release	REL-001 — Release 4.1.0
Release Version	4.1.3
Release Date	2023-01-15
Created Date	2022-10-30

2. Scope & Objectives

This test plan covers full testing for the DigitalWallet application. Suite covering Notification Handler scenarios for APP-004.

3. Test Strategy

Testing will follow a risk-based approach with priority on Critical severity scenarios. Automated test cases will be executed first to detect regressions early, followed by manual exploratory testing for edge cases. Performance and security test cases will run in parallel in dedicated environments.

4. Requirements Under Test

REQ-0516	UI Behavior — Offline Mode	Connectivity	High	Approved
REQ-0257	UI Behavior — Playlist Shuffle	Authentication	Critical	Draft
REQ-0254	Compatibility — Push Notification Delivery	Authentication	Low	Approved
REQ-0451	Security — Nfc Tap-To-Pay	Performance	High	Draft
REQ-0439	Functional — Push Notification Delivery	Data Synchronization	Critical	Approved

5. Test Cases Summary

TC-0203	Confirm that NFC tap-to-pay triggers the expected ...	Negative	Automated	Low
TC-0224	Ensure search query execution synchronizes correct...	System	Manual	Low
TC-0288	Verify that session token refresh fails gracefully...	Performance	Automated	Critical
TC-0341	Validate that search query execution returns the c...	Compatibility	Automated	High

SYNTHETIC DATA — No real Samsung confidential information

TC-0386	Test that NFC tap-to-pay correctly handles invalid...	Smoke	Manual	Low
TC-0412	Confirm that health metric upload triggers the exp...	Integration	Semi-Automated	Critical
TC-0479	Validate that media streaming enforces access cont...	System	Automated	Critical
TC-0499	Validate that firmware over-the-air update returns...	Reliability	Automated	High

6. Test Environments

Primary	Mobile Lab — Android 14 — WiFi-6 (ENV-001)
Secondary	Staging — Android 13 — LTE (ENV-007)
Extended	Low Network Env — Android 14 — Low-BW Sim (ENV-009)
Performance	High Load Env — Ubuntu 22.04 — Ethernet (ENV-010)

7. Entry & Exit Criteria

Entry — Build	Smoke suite must pass 100% before full regression begins.
Entry — Env	All required environments must be Available status.
Entry — Defects	No Critical-severity open defects from the previous cycle.
Exit — Pass Rate	Overall pass rate >= 95%.
Exit — Critical	Zero open Critical-severity defects.
Exit — Coverage	All Priority=High test cases executed.

8. Risks

Network instability in low-BW env	Medium	Reserve stable WiFi fallback
Device unavailability	Low	Reserve backup devices 48h ahead
Build quality regression	Medium	Execute smoke before full regression
Flaky automation scripts	Low	Quarantine flaky TCs, re-run 3x

9. Responsible Engineers

ENG-021	David Lee	Senior QA Engineer	Platform QA
ENG-058	Ben Davis	Test Architect	Security QA
ENG-083	Nina Vargas	Security Tester	Mobile QA

10. Synthetic Data Notice

This document is entirely synthetic and intended for AI/RAG research only.
